Abstract (en)

[origin: WO2020143955A1] The invention relates to a patient-positioning device, comprising a first member (3.1), which is designed as a base frame, for fastening the patient-positioning device (1) on a base (5); a second member (3.2) which is mounted on the first member (3.1) so as to be rotatable about a first axis of rotation (D1) by means of a first joint (4.1); and a third member (3.3) which is mounted on the second member (3.2) so as to be rotatable about a second axis of rotation (D2) by means of a second joint (4.2), wherein the third member (3.3) is arranged on the second member (3.2) by means of the second joint (4.2) in such a way that, with a floor mounting of the first member (3.1), the third member (3.3) is arranged below the second member (3.2) by means of the second joint (4.2) in order to suspend the third member (3.3) on the second member (3.2) in an overhead arrangement by means of the second joint (4.2), wherein the third member (3.3) is mounted so as to be rotatable under the second member (3.2) by means of the second joint (4.2). The invention additionally relates to an associated medical workstation having such a patient-positioning device.
