Abstract (en)  
[origin: WO2020144441A1] The present invention relates to a trim structure (10) intended on one hand to receive a door, in particular an internal door, and on the other hand to be joined to a partition, which structure comprises: - two lateral walls (11, 12) facing one another and spaced apart by a thickness (e1), said thickness being adjusted with respect to the thickness (e2) of the partition such that said lateral walls form an external surface that is flush with the external surface of the partition when the structure is joined to the partition; - a transverse end wall (13) connecting the two lateral walls; - said transverse end wall (13) comprising a planar surface (14) that is configured to butt up against the thickness of a vertical edge face of the door and a projecting element (15) forming a bearing surface for the door; - said walls being formed from at least one composite panel, said panel comprising a central layer (20) sandwiched between two facing layers (18, 19).
