Abstract (en)

[origin: WO2020144175A1] The invention relates to a system and method for capturing a sequence of movement of a person. The method according to the invention comprises capturing, by means of a contactless sensor, a plurality of images of the person during a sequence of movement, wherein the plurality of images shows the movements of the body elements of the person, creating at least one skeleton model having limb positions for at least some of the plurality of images, and calculating the sequence of movement from the movements of the body elements of the person by comparing the changes in limb positions in the at least one created skeleton model.
