Abstract (en)
[origin: WO2020144132A1] The invention relates to a terminal block that is able to be fastened to a frame of an electric cutting apparatus and comprises a holder (20) provided with at least one positioning and holding finger, a cover (40) provided with at least one positioning and holding peg (42) and a securing device (60). The at least one positioning and holding finger is able to be introduced into a positioning and holding recess in the frame. The at least one peg (42) is able to be slid in a positioning and holding slideway (114) of the frame. The securing device (60) secures the cover (40) to the holder (20) when the positioning and holding finger is introduced into the positioning and holding recess and the peg (42) is slid in the positioning and holding slideway (114).
