Abstract (en)

[origin: WO2020144405A1] The invention relates to an electrical socket system. The system is configured to identify a stand-by mode of operation of a plugged electrical device when the electrical device is set to a stand-by mode, where the controller (2) is configured to close the electronic switch (3), the electricity meter (4) is configured to measure a stand-by power, the controller (2) is configured to save the stand-by power. The system is configured to monitor a mode of operation of the plugged electrical device, where the electricity meter (4) is configured to measure the power. The system is configured to control the mode of operation of the plugged electrical device, where the controller (2) is configured to open the electronic switch (3) when the measured power corresponds the stand-by power.
