Abstract (en)
In a household thin paper storing container 100, a sliding contact part 52 on an opened lid body 20 (lid hinge part 21) side slidably contacts a braking part 51 on a container body 10 (container hinge part 11) side to apply a frictional force to the turning lid body 20, so that turning momentum of the lid body 20 can be suppressed. Therefore, the household thin paper storing container 100 is prevented from being deviated or disoriented from an installed position thereof in reaction to the opening of the lid body 20. In this manner, the lid body 20 of the household thin paper storing container 100 placed at a desired position can be suitably opened, and a household thin paper P can be taken out from the storing container 100 and used.
