Abstract (en)
[origin: CN113668136A] The invention relates to a method for maintaining a warp knitting machine, in particular to a method for maintaining a warp knitting machine having at least one guide bar (1) which has a piezoelectric bending transducer (6) to which a knitting tool (5) is fastened. The purpose of the present invention is to achieve high productivity in a warp knitting machine. For this purpose, it is provided that at least one electrical characteristic variable of the bending transducer (6) in the installed state is repeatedly determined and the characteristic variable is compared with at least one predefined limit value.
