Abstract (en)  
[origin: WO2020148011A1] The invention relates to an applicator for application of a microarray, comprising a housing (10) in which a plunger-type element (20) is arranged such that it can move linearly. A retainer element (38) is also provided for receiving a microarray (28). A pressure element (34) makes it possible for the plunger-type element (20) to be displaced in order for it to act upon a microarray (28) received by the retainer element (38). An actuation element (44) allows the plunger-type element (20) to be held in an internal position, and this can be released by actuating said actuation element (44).
