Abstract (en)
[origin: WO2020148713A1] A portable puppet theater (1), comprising a pair of side walls (2) and a front wall (3) having a central opening (4) which is designed to face the audience, a plurality of inner walls (5) defining one or more sceneries (5A) and a curtain (5B), a cover element (6), which is adapted to cover the side walls (2) and the front wall (3). The side walls (2) and the front wall (3) are substantially vertical and hinged together to form a foldable structure (7) which is adapted to alternate from a collapsed configuration with the walls (2, 3) in mutually overlapping relationship, and an upstanding configuration with the walls (2, 3) at right angles and substantially vertical, and vice versa. The cover element (6) is in the form of a lid, with a flat central portion (13) and upwardly folded edges (14) to receive therein the inner walls (5) and the foldable structure (7) in the collapsed configuration. The cover element (6) is adapted to be turned upside down with the folded edges (14) facing downwards and contacting the side walls (2) and the front wall (3) in the upstanding configuration. Furthermore, the flat central portion (13) of the cover element (6) has a plurality of slits (15) to allow the inner walls (5) to be removably introduced therein from the top to positions facing the central opening (4).
