Abstract (en)

[origin: EP3912614A1] The present invention concerns a nasal washing device (1) comprising a main body (4) comprising an electrically-driven compressor unit (5), a reservoir (3) for containing a liquid solution to be aerosolized, nebulization means (7) for aerosolizing the liquid solution, and a nasal interface (2) comprising an exit orifice (6) for delivering an aerosolized solution. It is further provided a damper member (8) arranged in the main body (4), said damper member (8) covering at least a part of the compressor unit (5). The damper member (8) is made of resilient material, such as silicone or the like. Thanks to the invention, it is possible to minimize the noise and to attenuate the vibrations resulting from the operation of the compressor unit (5). The invention further concerns a nasal cleaning set comprising a transport bag containing a nasal washing device (1) according to the invention and, preferably instructions for use
