Abstract (en)
A wall-attached water discharging device (10) is provided with a valve housing (1), a valve core (2), a handle (3), two connecting pieces (4), and two water inlet connectors (5). The valve housing (1) is provided with two laterally extending extension tubes (14), the two connecting pieces (4) are slidably connected to the two extension tubes (14), so that the water inlet connectors (5) inserted into the connecting pieces (4) may be easily aligned with and connected to two water inlet tubes pre-buried in a wall. Based on the foregoing technical solution, installation and adjustment are simple, a thickness is small, and the wall-attached water discharging device (10) is in an upright posture after installation.
