Abstract (en)

[origin: CA3126216A1] The invention concerns an article of clothing (10) comprising at least two conductive wires capable of transmitting an electric current, at least one conductive wire being integrated into at least one flat seam (12a); and at least one electrical interconnection between the at least two conductive wires; the electrical interconnection integrating a weld (25) between the at least two conductive wires; the electrical interconnection is protected by two layers of fabric (21-23) attached respectively above and below the electrical interconnection: a lower layer of fabric (22) secured to the article of clothing (10) above which the at least two conductive wires extend; and an upper layer of fabric (23) secured to the lower layer of fabric (22) so as to form, with the lower layer of fabric (22), a protective barrier around the electrical interconnection.
