Abstract (en)  
[origin: WO2020152568A1] A skin renewing and healing mixture of peptide components significantly accelerates the healing of wounds. It can be used in particular for the treatment of chronic, flamed and complicated wounds, but also common injuries, post-operative wounds or burns. In healthy patients, the mixture reduces the time required for healing up to one third; in the case of difficult-to-heal wounds, the skin renewing and healing mixture of peptide components reduces the time required for healing up to 7 times. With chronic wounds, in particular decubitus and venous ulcers, the skin renewing and healing mixture of peptide components ensures the improvement of wound healing or even the complete healing of the wound as a result of the effect of the combination of the peptide components. Preferably, the skin renewing and healing mixture of peptide components is applied to wounds in a sterile protein and saccharide gel matrix preventing infection development thus allowing more efficacious wound healing. The skin renewing and healing mixture of peptide components can be applied in aesthetic medicine and cosmetics.
