Abstract (en)
[origin: WO2020152141A1] The invention relates to a diffuser (1) for a pressurized container fitted with a valve, notably for an aerosol generator, which diffuser is equipped - with a base body (10) formed of a concave wall forming a cavity, and having a finger tab (11) intended to be depressed by the user to operate the valve, and - with an outlet duct placed in the cavity of the base body (10), which duct has a first end equipped with means (21) for collaborating with the valve of the pressurized container, and a second end for expelling the product contained in the pressurized container. According to the invention, the outlet duct and the base body are two distinct parts which are joined together by mechanical attachment means, it being possible for rotation-proofing means (17) to be provided in order to prevent the outlet duct from rotating with respect to the base body.
