Abstract (en)
[origin: WO2020152219A1] The invention relates essentially to a parallelepiped box (1) defined by long (4) and short (5) vertical peripheral walls. The box (1) comprises internal compartments (2) separated by vertical partitions (3, 3c) and at least one inner central column (7) which is arranged at the junction of the internal partitions (3 and 3c) and extends from a multi-position interlocking device (8) located in the lower portion of the box (1) to an interlocking device (9) located in the upper portion of the box (1). The invention also relates to a civil engineering structure that comprises at least two such boxes (1).
