Abstract (en)  
[origin: WO2020151961A1] The invention relates to a testing device for testing the fluid tightness of a fluid cut-off device (3) which comprises a movable, electrically insulating cut-off element (1) that can be subjected to pressure and two connection devices (2) arranged on either side of the cut-off element, wherein: the testing device comprises a first testing electrode (4), a second testing electrode (5) and a measuring device (6) connected to the first testing electrode (4) and to the second testing electrode (5) in an electrically conductive manner; the measuring device (6) is designed to measure the electrical resistance or the current flow between the first testing electrode (4) and the second testing electrode (5); a first connection element (7) and a second connection element (8) are provided; the first connection element (7) and the second connection element (8) are designed for connection to the fluid cut-off device (3), in particular to the connection devices (2) of the fluid cut-off device (3); the first testing electrode (4) is disposed on the first connection element (7); the second testing electrode (5) is disposed on the second connection element (8); and the first connection element (7) and/or the second connection element (8) have/has a fluid opening (9). The invention further relates to an arrangement of a testing device according to the invention with a cut-off device, and to a method for testing fluid tightness.
