Abstract (en)
[origin: WO2020177757A1] An integrated power regulator comprises a plurality of power modules connected in parallel between a positive terminal and a negative terminal of a power source. Each power module of the plurality of power modules comprises a plurality of power conversion cells connected in parallel between the positive terminal and the negative terminal of the power source. A first power conversion cell and a second power conversion cell of the plurality of power conversion cells are configured to operate in two different operating phases. A third power conversion cell and a fourth power conversion cell of the plurality of power conversion cells are configured to operate in a same operating phase.
