Abstract (en)

The invention relates to a warning device for signalling limited amount of a pulling rope on a winch drum and to a forestry winch comprising the said device. The warning detects the distance between the drum and an element, which ensures optimal winding of the rope onto the drum (5), which is indicative for remaining layers of the rope on the drum, wherein detection is enabled with at least one switch, sensor or any other element, which can detect the said distance. The warning comprises a pushing cylinder (1), a signalling device (3), which is arranged to emit a sound and/or a visual signal, and at least one sensor, switching device or any other element (2), which can detect the distance between the pushing cylinder and the drum and which can create a signal to the signalling device to warn about the limited amount of rope on the drum.
