Abstract (en)
[origin: GB2573360A] A garment (10) comprises a neck opening (12) for receiving a neck of a wearer and a supporting, shaping inner layer (16) having a body portion (18) and a pelvic portion (20). The pelvic portion (20) includes leg openings (22) for receiving a respective leg of a wearer and a crotch portion (24) extending between the leg openings (16). At least one of the body and pelvic portions (18, 20) includes an elastic material to impart compression on a wearer. The garment (10) also comprises a decorative outer layer (14), with the inner layer (16) attached to the outer layer (14) only at or adjacent to the neck opening (12). The outer layer (14) is made from a different material to that of the inner layer (16) and does not impart compression on the wearer. The crotch portion may comprise fastening means (30a, 30b) to adjust the length of the inner portion. The pelvic portion may comprise first and second subsections (28a, 28b), the lower subsection providing a greater degree of compression.
