Abstract (en)

[origin: WO2020178249A1] The invention relates to an instrument support (10) of a treatment device (1), in particular a dental treatment device, a primary instrument (11) being provided on the treatment device (1) and at least a portion of the at least one primary instrument (11) being an integral part of the treatment device (1). The invention is characterized in that the instrument support (10) comprises an instrument support-side interface for connection, preferably reversible connection, of a modular secondary instrument (12), said secondary instrument (12) preferably being a powder spray device.
