Abstract (en)
[origin: WO2020157421A2] Fluid product reservoir comprising a neck (12) defining an opening (16), the neck (12) comprising an upper annular edge (14) defining an outer ridge (140) and an inner ridge (146), the opening (16) being defined by an inner wall (161) connected to the upper annular edge (14) by the inner ridge (146), characterized in that at least one cutout (15) is provided at the upper annular edge (14), this cutout (15) extending on the inner wall (161), interrupting the inner ridge (146), but does not extend as far as the outer ridge (140), such that the upper annular edge (14) is continuous over its entire periphery, including at the cutout (15), this cutout (15) further forming a base (151) defining a ridge (156) with the inner wall (161) of the opening (16).
