Abstract (en)

[origin: WO2020156940A1] The subject matter of the present invention is a fuel composition which comprises - at least 85% by weight of one or more fractions of hydrocarbons having a distillation range within the range extending from 100 to 400°C and having a paraffin content greater than or equal to 90% by weight; - at least a first additive consisting of a particular quaternary ammonium salt; and - at least a second additive consisting of a phenolic antioxidant. The subject matter of the invention is also the use of a composition of additives comprising said first and second additives, for improving at least one property of a paraffin-rich fuel composition.
