Abstract (en)

[origin: WO2020157005A1] The invention relates to a cooling device (12) for an object detection sensor (10), comprising a sensor-end heat transmission element (30), a sensor-distant heat absorption element (32), wherein the sensor-end heat transmission element (30) and the sensor-distant heat absorption element (32) are arranged opposite to one another, wherein a heat transmission surface (40) of the sensor-end heat transmission element (32) and a heat absorption surface (42) of the sensor-distant heat absorption element (40) are designed to be at a distance from one another by an intermediate space (43). The invention also relates to an object detection sensor (10) comprising such a cooling device (12).
