Abstract (en)
[origin: WO2016146096A2] The invention relates to a membrane Stirling engine, comprising a working gas, a hot part and a cold part, the working gas of the Stirling engine being located in membrane casings both in the hot part and in the cold part of the engine, said casings having two ends. The casings are hermetically closed on one end and open on the opposite end, the open end leading to the hot or cold chamber of a regenerator box in a tightly sealing manner.

Abstract (de)
Die Erfindung betrifft eine Membran-Stirlingmaschine, wobei die Membranhüllen mit Flüssigkeit mittels hydraulischer Druckpumpen periodisch gefüllt werden, und hierbei ein sich ebenfalls im Druckbehälter befindliches Gas isotherm komprimieren.
