Abstract (en)

This invention relates to an improved shaped charge perforator, especially to energy focusing device for a shaped charge perforator, said perforator comprising a high explosive and a liner, wherein the focussing device is located between the perforator and a target, the energy focusing device comprising an aperture there through, wherein the energy focussing device is located co-axial with the perforator, such that in use said formed jet of the perforator, passes through said aperture, wherein the focussing device comprises a choke region co-axial with the perforator, said choke region has a diameter less than the diameter of the shape charge, to focus the output of the high explosive and remaining liner through said choke region and through said aperture.
