Abstract (en)

[origin: WO2020161062A1] The invention relates to a dispenser (1) for discharging flowable, e.g. liquid or paste-like masses (2), comprising a storage container (3) for the masses (2) and a pump chamber (4), as well as comprising a dispenser head (5), wherein the dispenser head (5) has a discharge opening (24) and the dispenser head (5) can be pressed down in the direction of a vertical axis (x) of the dispenser (1) against a stop (6) to carry out a pumping process, wherein the stop (6) can be adjusted in terms of its height. In order to advantageously design a dispenser of this type in terms of handling, according to the invention, the stop (6) is formed by an outwardly exposed sliding track (7) that can rotate about the vertical axis (x), against which a radially outwardly protruding protrusion (8) on the dispenser head (5) comes into contact when being pressed down.
