Abstract (en)
[origin: WO2020160947A1] The invention relates to a sheet processing machine (01) with at least one shaping device (900) and at least one sheet delivery device (1000) which is arranged along a transport path provided for transporting sheets (02) downstream of the at least one shaping device (900). The at least one shaping device (900) has at least one shaping station (909) which is made of at least one plate cylinder (901) and at least one counter-pressure cylinder (902), and at least one separation device (903) is arranged along the transport path provided for transporting sheets (02) downstream of the at least one shaping station (909) in order to remove waste pieces from sheets (02). The at least one separation device (903) has at least one separation transport means (904), and at least one transport means (09; 906) designed as a selective transport means (09; 906) is arranged along the transport path provided for transporting sheets (02) adjacently to the at least one separation transport means (904), said transport means being designed as at least one upper suction transport means (09; 906) for transporting sheets (02) in a suspended manner.
