Abstract (en)

[origin: WO2020160833A1] The mounting system (1) for mounting an anchoring device (3) in the production of partial constructions such as reinforced walls, ceilings and floors made of concrete using formwork panels comprises two wings (5) which are interconnected by means of a retaining region (15). The retaining region (15) comprises two legs (16) which, when placed onto an anchoring device, extend laterally from the walls of the anchoring device and latch thereon by means of latching elements (25). The two wings (5) are fastened to reinforcing iron (33) by means of binding wires so that the anchoring socket is non-displaceably retained in the formwork.
