Abstract (en)
[origin: WO2020212039A1] The invention relates to an annular resonator (8) with a multiplicity of perforations (13) for installation into a combustor arrangement of a static gas turbine installation (1), characterized in that the resonator (8) is produced from refractory ceramic. The invention furthermore relates to a method for producing such a resonator (8), and to a combustor arrangement for a gas turbine installation (1) with a combustor unit (2), which has a combustor (6), with a transfer line (9), which is arranged downstream of the combustor unit (2) and which is designed to conduct hot gas generated by the combustor (6) to a turbine, and with at least one resonator (8) according to the invention.
