Abstract (en)

[origin: WO2020161427A1] The present invention relates to a device for projecting an image such as a safety sign and/or a message onto a surface such as the ground or a wall, said device comprising at least one light source and an optical system comprising at least one optical lens; said device is noteworthy in that it comprises at least means for producing an image and/or a message from a collimated light source, and at least one convergent lens that focuses the collimated beams of the image on the entrance pupil of a fisheye lens or wide-angle objective.
