Abstract (en)  
[origin: CA3128446A1] The present invention concerns a radio-protective shield (5) comprising a wall (6) made from transparent material, a peripheral edge (611) of a first face (61) of the wall (6) made from transparent material coming to bear against a bearing face (811) of a counter-frame (8) via a seal (11), the radio-protective shield (5) comprising a fastening frame (9) provided with bearing means (12) for bearing against a peripheral edge (621) of a second face (62) of the wall (6) made from transparent material, which bearing means (12) comprise a longitudinal bearing structure (121) comprising a contact surface (1212) in contact with the peripheral edge (621), which radio-protective shield (5) further comprises securing means (10) for securing the counter-frame (8) and the fastening frame (9) together, this radio-protective shield (5) being characterised by the fact that the bearing means (12) comprise elastic return means (122) capable of applying pressure against the longitudinal bearing structure (121) towards the wall (6) made from transparent material.
