Abstract (en)
The present disclosure relates to a face mask protection for read lip. Namely a face mask protection that serves as a barrier to the spread of viruses and bacteria by air. The face mask of present disclosure comprises an elongated fabric portion to cover the face of a user from the nose to the chin and cheeks, a nasal clip and two ear loops connected to the elongated fabric portion to fix the elongated fabric to the face, wherein the elongated fabric portion comprises a hole in the centre with a transparent polymer portion sewn to the fabric by an embordering seam, a plurality of folds located at the lateral side and below the transparent polymer portion; an elastic material surrounding the edges of said elongated fabric.
