Abstract (en)  
[origin: EP3922579A1] A platform for rail-road transport, in particular wood and metal logs, according to the invention consists of a frame, stanchions and at least one transverse wall, the platform frame being made of a floor and sideboards, the floor having the form of a rectangle consisting of two longitudinal beams, two transverse beams and support beams spanning between the longitudinal beams, and a single sideboard consisting of a skid, a handrail, vertical posts and stanchion slots, and it is characterised in that the skids (1g) and the handrails (1f) end with container corners (1j, 1k), a connector (2f) for hook-loading is mounted to the transverse wall (2), transport rollers (4a) and rails (1m) engaging the roller mechanism (11b) of a hook device (11) are mounted symmetrically under the floor (1a), and in the rails (1m) there are two forklift pockets (1t), whose position corresponds to the position of forklift pockets (1u) in the sideboards (1b), the spacing of axes of pockets (1t) in the rails (1m) equalling the spacing of axes of forklift pockets of 20-foot containers.
