Abstract (en)

A reversible retaining system (1) comprises a retaining arm (2) comprising a mushroom pin (4) arranged perpendicularly to a longitudinal extension direction (2a) of the retaining arm (2) and a reversible coupling device (10). A slot (14) extends according to an open profile at a side opening (15) to permit the lateral access of a stem (4a) of the mushroom pin (4). The coupling device (10) comprises a locking member (24) that is movable between a consent position, wherein said side opening is accessible, and in a locked position, in which said side opening is not accessible.
