Abstract (en)

[origin: WO2020165528A1] Disclosed is an electrical repellent device comprising an electric generator (50) connected via its two terminals to a conductive composite tape (3), and a connector mechanically clamping the conductive composite tape (3) around an object to be protected and connecting the electric generator (50) and the conductive composite tape (3), the connector being characterised in that it comprises: a support (1) made from metal material or from insulating polymer; and at least two rods (15) mounted on the support (1) and each comprising, on their outer surface, at least one conductive element (20); and a pressure member keeping the at least one conductive element (20) in contact with at least one conductive strip (31) of the composite tape (3); and two connection terminals configured to apply the potential difference that exists between the two terminals of the electric generator (50) and the conductive elements.
