Abstract (en)

[origin: WO2020165287A1] The invention relates to a wringing device (1) comprising: - a wringer basket, - a support for the basket, - a guide device for guiding the basket in rotation relative to the support about a longitudinal axis, the guide device being assembled to the support and to the basket, characterised in that it comprises two tabs (32, 34) opposite each other assembled to the wringer basket and extending along the longitudinal axis from the cavity of the basket to beyond the main opening outside the basket, the tabs being spaced apart from each other in such a way as to: - guide the insertion of two side plates of a mop head between the two tabs when these plates are parallel to the longitudinal axis, - prevent the plates from being rotated about the main axis in at least one direction of rotation relative to the basket when these plates are inserted into the cavity of the basket.
