Abstract (en)

[origin: WO2020263260A1] Examples of media stops and media storage trays including the media stops are disclosed. In an example, the media stop includes a base including a first end and a second end opposite the first end, a top side, and a bottom side opposite the top side. In addition, the media stop includes a stop wall extending from the top side. The base is to be slidingly coupled to a track of the support surface in a first orientation and a second orientation. When the base is in the first orientation, the first end of the base is more proximate an outer end of the support surface than the second end of the base. When the base is in the second orientation, the second end of the base is more proximate the outer end of the support surface than the first end of the base.
