Abstract (en)

[origin: WO2020167271A2] The invention relates to a carrying apparatus which provides easy carrying of drawing papers without forming a folding line, particularly for architects and architecture students. The carrier bag of the invention is characterized in that it has a configuration which provides for carrying on back and by hand, by opening the two layers (1, 2), as shown in Figure 1, which are preferably made of transparent and durable material and by placing the paper in-between as shown in Figure 3 and by bending and fastening with hook-and-loop fasteners (3) and similar assemblies as shown in Figure 2.
