Abstract (en)

[origin: WO2020164843A1] The invention relates to an assistance device (1) for assisting the movement of an opening leaf (2), comprising an outer opening control (10) mechanically connected to at least one lock (40, 50), and a locking device (30) associated with the at least one lock, characterized in that it comprises a movement means (90) for moving the opening leaf from a closed position to a partially open position, said movement means being electrically connected to the outer opening control (10) by a control unit (80), an additional control means (15) associated with the control unit (80) enabling the movement of the opening leaf by said opening means (90) from a closed position to a partially open position.
