Abstract (en)
[origin: EP3925496A1] Device for safely transporting a newborn together with the mother in an outpatient setting, which comprises two fixed-length top straps (4) extending from the top part of a canvas (2); two length-adjustable side straps (3) extending from the bottom side parts of the canvas (2); two bottom straps (6) extending from the side straps (3); and a quick-opening clip closure (5) for joining the top straps (4) to the side straps (3), such that in use, the top straps (4) are arranged on the mother's shoulders and the side straps (3) are arranged on the mother's back, while the newborn is disposed between the canvas (2) and the mother's chest, allowing skin-to-skin contact between the two.
