Abstract (en)
[origin: US2021387236A1] The present invention relates to a wiping mop (10) with a housing (20), wherein an anchoring mechanism (11) for a handle (12) for guiding the wiping mop (10) is attached to the upper side of the housing. A wiping band (30) which is closed in itself is guided partially around and partially through the housing (20). On entry into the housing (20) the wiping band (30) runs through a mechanical dirt separator as well as a first (80) and a second (70) tank to be filled with wiping liquids in each case, whereby the wiping band (30) is cleaned of dirt particles taken up during use and is moistened for further wiping. Before leaving the second tank (80) the wiping band (30) is wrung out by cheeks of an outlet slot which are displaceable manually relative to one another.
