Abstract (en)

[origin: CN113818312A] The invention relates to a ground compacting device (10) for compacting a floor covering layer (8), comprising at least one compacting roller (5), a covering edge processing device (7) comprising an edge processing roller (12), and a cut object deflector (16), wherein the cut object deflector (16) is supported on the covering edge processing device (7) by means of a bearing device (18), the bearing device (18) is designed such that the relative position of the at least one material guide surface (17) of the cut object deflector (16) relative to the adjustable roller holding device (13) of the cover edge processing device (7) can be automatically changed. The invention further relates to an asphalt roller (1) having such the ground compacting device (10) and to a method (27) for operating such the ground compacting device (10).
