Abstract (en)
The present invention relates to a floor deck for a multi-storey building, comprising a surface layer having a first surface layer side and a second surface layer side, a second layer having a sound dampening effect having a first side and a second side, a supporting layer having a first support side and a second support side, the distance from the first support side to the second support side defining the height of the supporting layer, wherein the supporting layer is an uninterrupted layer seen vertically over its mounted position, made from a plurality of planks combined to form one supporting unit, the planks having a plank thickness defined from a first wide face to a second wide face, a plank width defined by a first narrow face and an opposing second narrow face and a plank length the plank length defined from a first end to a second end. Moreover, the present invention also relates to the use of the floor deck buildings having two or more storeys.
