Abstract (en)

[origin: EP3926170A1] Disclosed are a method and a device for balancing crankshaft deformation e, a crankshaft with counterweights determined according to the method, and a scroll compressor using the crankshaft. The method includes: determining a component centrifugal force required by a counterweight to overcome the crankshaft (9) deformation caused by both an orbiting scroll (6) centrifugal force and a gas force; and determining the counterweight according to the component centrifugal force. The counterweight is arranged on the crankshaft (9). The method solves a technical problem that, in the related technology, only the influence of the orbiting scroll centrifugal force on the crankshaft is considered and a balance effect is poor.
