Abstract (en)
[origin: EP3698662A1] A smoking substitute device (10), comprising: a printed circuit board assembly (400) including a processor; a wire antenna (402), configured to allow the processor to wirelessly communicate with a remote device (2, 4); and a battery (128), for powering the smoking substitute device. The wire antenna is located between an extremity of the smoking substitute device closer to the printed circuit board than the battery, and an extremity of the battery closest to the printed circuit board assembly.
