Abstract (en)

[origin: WO2020169521A1] The invention relates to a dishwasher basket (126) for cleaning articles (112) to be cleaned with at least one cavity (114), in particular for cleaning bottles (118). The dishwasher basket (126) comprises a basket base (144) and a plurality of nozzles (142) extending from the basket base (144). The basket base (144) is equipped with at least two fluid supply lines (154). Each of the nozzles (142) faces at least one wash fluid channel (150) which can be fluidically connected to a wash fluid supply line (156) in the basket base (144) and leads to at least one wash nozzle opening (172) of the respective nozzle (142). Additionally, each of the nozzles (142) has at least one rinse fluid channel (152) which is designed separately from the wash fluid channel (150), wherein the rinse fluid channel (152) can be fluidically connected to a rinse fluid supply line (158) in the basket base (144) and leads to at least one rinse nozzle opening (174) of the respective nozzle (142). The invention additionally relates to a dishwasher basket system (124), to a dishwashing system (110), and to a method for cleaning articles (112) to be cleaned comprising at least one cavity (114).
