Abstract (en)
[origin: WO2020169895A1] The invention relates to a method for displaying a load of a vehicle (1) comprising: - a plurality of sub-assemblies, - each sub-assembly comprising a vehicle wheel, a vehicle wheel suspension (11a, 21a, 31a, 41a) and a sensor (11, 21, 31, 41) supplying at least one measurement that makes it possible to estimate a variation in the length of said suspension due to a load applied to said suspension, - a display device (53, 71), - a processing unit, said method comprising the following steps: - acquisition by the processing unit of at least one measurement from each sensor, - determination by the processing unit of the load applied to each suspension, - calculation of the loads applied to the plurality of suspensions in order to determine the vehicle load, - display by the display device of the vehicle load and/or of the load applied to each suspension.
