Abstract (en)

[origin: WO2020193069A1] The invention relates to a method for ascertaining the risk of condensation in an enclosure (6) of a high-voltage device (20), wherein - the interior temperature in the enclosure (6) is ascertained using an interior temperature sensor (10) arranged in the enclosure (6), thereby obtaining interior temperature values TI, - the exterior temperature of the enclosure is ascertained using an exterior temperature sensor (15) arranged outside of the enclosure, thereby obtaining exterior temperature values TA, - the interior temperature values TI and the exterior temperature TA values are transmitted to a data processing unit (16), - the data processing unit (16) ascertains a temperature difference value TD by calculating the difference between the interior temperature value TI and the exterior temperature values TA based on  $TD = TI - TA$ , wherein the data processing unit (16) generates a warning signal (18) if the temperature difference value TD lies below  $3^{\circ}\text{C}$ . The invention additionally relates to a high-voltage device (20) which is designed to carry out the method according to the invention.
