Abstract (en)

[origin: WO2020200687A1] To manage reports (M) of an automation system (2), which comprises a reporting system (9) for generating reports (M) and at least one first human-machine interface (10) on which the reports (M) are displayed, and wherein the reporting system (9) is communicatively connected to the human-machine interface (10), at least one first category (A) and a second category (B) of reports are defined and the reports (2) of the automation systems (2) are each assigned to at least one of the two categories (A, B). A function (45) is applied at least to input data (B1, B2, B3, A1) that represents reports (M) assigned to the second category (B) and displayed on the first human-machine interface (10). The function (45) was trained by an algorithm from the field of machine learning and generates output data (A1 or A2) that represents a report (M) of the automation system (2) assigned to the first category (A). The report (M) represented by the output data (A1 or A2) is displayed on a second human-machine interface (30), the second human-machine interface (30) being communicatively disconnected from the reporting system (9).
