Abstract (en)

[origin: WO2020192918A1] The invention relates to a method for maintaining a first electrical component. In the method according to the invention, temperature measurement values recorded at the first electrical component are stored as a first set of measurement data, wherein temperature measurement values recorded at least at one second and one third electrical component are stored as second and third sets of measurement data, and, taking into account the three sets of measurement data, a verification is carried out to determine whether a maintenance operation is necessary at the first component. The invention also relates to a data-processing system for carrying out the method according to the invention.
